 - Nursing Care Rider at no additional cost
 - Terminal Illness Benefit Rider at no additional cost
 - Guaranteed Lifetime Income Rider (optional) at an additional cost (max issue age 75)

Guaranteed Lifetime Income Rider (GLIR) for Indexed Annuities

The following is an overview of the different GLIRs offered by National Life Group. Please review each product's disclosure and specification to see which GLIR available on the policy along with current GLIR Rollup information*, any applicable bonus, withdrawal percentage, rider charge and other rider guidelines.

The GLIR provides for a lifetime income stream while leaving the policy owner in control of their money. On most products the GLIR can be added at an additional cost, please note for some policies the GLIR is required at policy issue. The GLIR provides for a calculation used solely to determine the lifetime income benefit (or death benefit on select policies). The Benefit Calculation Base or Income Calculation Base is not a value that can be withdrawn by the policy owner.

Guaranteed Lifetime Income Rider for FIT Certain Income

- Benefit Calculation Base equals premium paid at issue and is increased by a bonus percentage
- Additional flexible premium payment during the first 30 years is increased by a bonus percentage and added to Benefit Calculation Base
- Benefit Calculation Base rolls up at a simple Rollup Rate in effect when first premium is received for all rollup years
- Rolls up until the earlier of election of income or the 30th policy anniversary
- At election of income the Benefit Calculation Base is multiplied by a Guaranteed Withdrawal Percentage based on attained age to determine lifetime income

Guaranteed Lifetime Income Rider for FIT Select Income

- At election of lifetime income the Accumulation Value is multiplied by an Activation Bonus based on how long since the policy has been issued
- The result of the above is multiplied by a Guaranteed Withdrawal Percentage based on attained age to determine lifetime income
- Income may increase after the start of lifetime income based on indexed interest credits

Guaranteed Lifetime Income Rider for Flexible Premium Policies

- Income Calculation Base equals premium paid at issue and includes additional premium payments
- Income Calculation Base rolls up at a compound Rollup Rate in effect when the premium is received for guaranteed number of years renewing annually thereafter
- Rolls up until the earlier of election of income or the 30th policy anniversary
- At election of income the Income Calculation Base is multiplied by a Guaranteed Withdrawal Percentage based on their attained age to determine their lifetime income

Bonus Guaranteed Lifetime Income Rider for Flexible Premium Policies

- Income calculation base equals premium paid at issue and includes additional premium payments
- The Income Calculation Base is credited with a bonus for each premium paid into the policy
- Income Calculation Base rolls up at a compound Rollup Rate in effect when the premium is received for guaranteed number of years renewing annually thereafter
- Rolls up until the earlier of election of income or the 30th policy anniversary
- At election of income, the Income Calculation Base is multiplied by a Guaranteed Withdrawal Percentage based on their attained age to determine their lifetime income

Bonus Guaranteed Lifetime Income Rider for Single Premium Policies

- Benefit Calculation Base equals premium paid at issue and is increased by a bonus percentage
- Benefit Calculation Base rolls up at a simple Rollup Rate in effect when premium is received for all rollup years
- Rolls up until the earlier of election of income or the 20th policy anniversary
- At election of income, the Benefit Calculation Base is multiplied by a Guaranteed Withdrawal Percentage based on their attained age to determine their lifetime income

Max Bonus Guaranteed Lifetime Income Rider for Single Premium Policies

- Policy must be in force 10 full policy years before income can be elected
- At election of income the Accumulation Value is multiplied by a Guaranteed Withdrawal Percentage based on their attained age to determine the base lifetime income
- Base lifetime income is multiplied by an Activation Bonus based on how long the policy has been in force to determine lifetime income
- Income may increase after the start of lifetime income based on indexed interest credits

Split Bonus Guaranteed Lifetime Income Rider for Single Premium Policies

- Policy must be in force 10 full policy years before income can be elected
- An Immediate Interest Credit is applied to the Accumulation Value of the Policy
- At election of income the Accumulation Value is multiplied by a Guaranteed Withdrawal Percentage based on their attained age to determine the base lifetime income
- Base lifetime income is multiplied by an Activation Bonus based on how long the policy has been in force to determine lifetime income
- Income may increase after the start of lifetime income based on indexed interest credits

Leveraged Guaranteed Lifetime Income Rider for Single Premium Policies

- Benefit Calculation Base equals premium paid at issue and is increased by a bonus percentage
- Benefit Calculation Base rolls up at a simple Rollup Rate in effect when premium is received for all rollup years
- Rolls up until the earlier of election of income or the 20th policy anniversary
- At election of income, the Benefit Calculation Base is multiplied by a Guaranteed Withdrawal Percentage based on their attained age to determine their lifetime income

Stacking Guaranteed Lifetime Income Rider for Single Premium Policies

- Benefit Calculation Base equals premium paid at issue
- Benefit Calculation Base receives a compound Rollup Rate plus an Indexed Rollup Amount that equals the dollar amount of interest credited from indexed interest accounts
- Rolls up until the earlier of election of income or the 20th policy anniversary
- At election of income the Benefit Calculation Base is multiplied by a Guaranteed Withdrawal Percentage based on their attained age to determine their lifetime income

Guaranteed Lifetime Income Rider with Enhanced Death Benefit for Single Premium Policies

- Benefit Calculation Base equals premium paid at issue
 - Income Calculation Base rolls up at a compound Rollup Rate guaranteed number of policy years renewing annually thereafter
 - Rolls up until the earlier of election of income or the 20th policy anniversary
 - At election of income the Benefit Calculation Base is multiplied by a Guaranteed Withdrawal Percentage based on their attained age to determine their lifetime income
- * Please note: the Rollup Rate is not an interest rate, it is used in the calculation of future withdrawal benefits.*

Additional Information

Interest Credits, Bonuses and Adjustments

Immediate Interest Credit

How it Works: For each premium and transfer received during a specific number of policy years (varies per product), NLG will credit the policy's premium account a percentage of the net premium. For example, if the product has a 5% immediate interest credit, a premium of \$100.00 would result in a credit of \$5.00 to the annuity's premium account. That premium account would continue to earn interest based on the crediting rate in effect at that time, based on the allocation selected by the policy owner. Please review the product disclosures and specification pages for detailed information.

Bonus Accumulation Value (BAV)

How it works: This is a vested accumulation value bonus (not an immediate, upfront bonus). During policy years 1 – 10, the BAV equals a specified percentage of the accumulation value. During policy years 11 – 15, a portion of the BAV is transferred to the accumulation value each policy year during this five year period. For example, for an annuity with a BAV issued to a 50 year-old, they would not fully realize the BAV until age 65; for a 65 year-old, they would not fully realize the BAV until age 80. Please note specific restrictions apply in order for the policy owner to receive the full benefit of the BAV. If the annuitant dies, the death benefit is the greater of the accumulation value plus the BAV, or the policy value. Please review the product disclosures and specification pages for detailed information.

Market Value Adjustment

A Market Value Adjustment (MVA) is an upward or downward adjustment that may be applied to amounts withdrawn from an annuity in the first ten Policy Years. The MVA applies to amounts withdrawn in excess of any Free Withdrawal Amount, even if the applicable Withdrawal Charge Percentage is zero. The MVA does not apply to any death benefit. Please review the product disclosures and specification pages for detailed information.
