Portfolio Manager
Industry: 2000
Sentinel: 2008

Performance Highlights

- The Sentinel Low Duration Bond Fund's Class I shares produced a total return of 0.46% for the first quarter of 2017. This compares to a return of 0.41% for the Bloomberg Barclays 1-3 Year US Government/Credit Index and 0.62% for the Morningstar Short-Term Bond peer group average during the same period.
- For the one-year period ending 3/31/17, the Fund's Class I shares returned 1.99%, the Bloomberg Barclays 1-3 Year US Government/Credit Index returned 0.71%, and the Morningstar Short-Term Bond peer group average return was 1.66%.

Bond Market Review

Risk assets continued to build on their strong performance from Q4 2016 as the calendar turned into 2017. Survey-based measures of consumer and business confidence accelerated strongly, while the US unemployment rate declined to 4.5%. Financial markets continued to anticipate stronger US growth and material economic stimulus from the incoming Trump administration, while measures of global growth improved, with the European Purchasing Managers' Index (PMI) rising sharply during the quarter to their strongest levels in over five years. Higher readings for headline inflation globally were

generally met with contained core measures, suggesting that most major global central banks would be slow and methodical in their removal of extraordinary levels of monetary accommodation. Market-based measures of inflation expectations continued to rise modestly during the quarter, even with a greater than 5% decline in oil markets to sub-\$50 level. The favorable global economic back-drop, easing of financial conditions, and progress towards their dual mandate gave the US Federal Reserve enough confidence to continue their normalization efforts and raise the Federal Funds Rate by 25 basis points (bps) to 1.00% at the March Federal Open Market Committee meeting. The Bloomberg Barclays US Corporate High Yield Index ended the quarter with a yield spread relative to the 10-Year US Treasury note 26 bps tighter from its Q4 2016 close, while the S&P 500 Index rose 6.07%.

US Treasury securities rebounded slightly in Q1 2017 after experiencing their second-worst quarterly total return since 1987 in Q4 2016, according to the BofA Merrill Lynch 10 Year US Treasury Index. The US 10-year Treasury yield declined 6 bps to 2.38% from 2.44% at the end of Q4 2016. Despite a Federal Reserve interest rate increase, rising inflation, higher levels of breakeven inflation and stronger than expected survey based confidence measures, the intermediate and longer maturity portions of the treasury market struggled to push higher in yield. First quarter 2017 GDP tracking measures pushed decidedly lower throughout the quarter, with weakness in consumer discretionary sectors such as autos suggesting that confidence gains experienced since the presidential election were not translating into

realized consumer and business spending. With markets having already priced in the potential for three interest rate increases by the Federal Reserve in 2017, along with some evidence surfacing of a disconnect in economic data, markets became increasingly cautious about pricing a faster pace of Federal Reserve interest rate increases as the quarter came to a close. The US 30-year Treasury yield slightly outperformed the 5-year US Treasury yield, flattening by 5 bps. Relative to developed global markets, US Treasury security and spread products continue to offer a superior yield advantage, which is particularly attractive to foreign and global investors.

Key Performance Attribution

The Sentinel Low Duration Bond Fund returned 0.46% (I Share NAV) during the 1st quarter of 2017, underperforming the Bloomberg Barclays 1-3 Year US Government/Credit Index by 0.05%.

During the quarter, the yield on the 10 year US Treasury fell by 6 bps to 2.39% from 2.45%, while the Fund was, on average, overweight duration vs. the benchmark by 0.74 years. The Fund's long duration position resulted in 3 basis points of underperformance vs. the benchmark. This was primarily due to the underperformance in swap spreads relative to US Treasuries. In addition, the Fund had limited exposure to US Treasuries as an asset class, which contributed 9 bps of positive allocation effects to overall performance.

Risk assets performed quite well during the quarter, with the Option Adjusted Spreads (OAS) on the Bloomberg Barclays US Corporate Index tightening by 5 bps, and the OAS on the Bloomberg Barclays US Corporate

Under an agreement signed between Sentinel Asset Management, Inc., the Sentinel Funds' investment adviser ("Sentinel"), and Touchstone Advisors, Inc., Touchstone has agreed to acquire certain assets related to Sentinel's business of providing investment advisory services to the Sentinel Funds. Closing of the transaction is subject to customary closing conditions, including the approval of the shareholders of each applicable series of Sentinel Group Funds, Inc., and is expected to be completed later in 2017. European Purchasing Managers' Index measures the performance of the manufacturing sector and is derived from a survey of 3,000 manufacturing firms. National data are included for Germany, France, Italy, Spain, the Netherlands, Austria, the Republic of Ireland and Greece.

Duration is a measure of the sensitivity of a bond's price to changes in interest rates. The shorter (longer) the duration, the lower (higher) the interest rate risk and price volatility. The Bloomberg Barclays 1-3 Year US Government/Credit Index is an unmanaged index of US government, government agency and investment grade corporate securities with maturities of one to three years.

The return for the Morningstar category is an average of funds within the particular category as determined by Morningstar based on investment styles as measured by their underlying portfolio holdings.

The Bloomberg Barclays US Corporate High Yield Index is an unmanaged index of US dollar-denominated, non-investment grade, fixed-rate, taxable corporate bonds. Securities are classified as high yield if the middle rating of Moody's, Fitch, and S&P is Ba1/BB+/BB+ or below, excluding emerging market debt.

The Bloomberg Barclays US Corporate Index (Investment Grade) is a broad-based benchmark that measures the investment grade, US dollar-dominated fixed-rate, taxable corporate bond market. It includes USD-denominated securities publicly issued by US and non-US industrial, utility, and financial issuers that meet specified maturity, liquidity, and quality requirements.

The Standard & Poor's 500 Index is an unmanaged index of approximately 500 widely held US equity securities chosen for market size, liquidity, and industry group representation.

BofA Merrill Lynch 10 Year US Treasury Index measures the performance of Treasuries with at least ten years remaining until maturity.

An investment cannot be made directly in an index.

Sentinel Investments is the unifying brand name for Sentinel Financial Services Company, Sentinel Asset Management, Inc., and Sentinel Administrative Services, Inc. Sentinel Funds are distributed by Sentinel Financial Services Company, One National Life Drive, Montpelier, VT 05604, 800-282-FUND, www.sentinelinvestments.com.

High Yield Index tightening by 26 bps. During the quarter, the Fund's asset allocation call resulted in 24 bps of outperformance, with the majority of the outperformance coming from the Fund's overweight to investment grade and high yield corporate bonds, as well as the aforementioned underweight to US Treasuries.

Security selection effects resulted in 1 bps of underperformance versus the benchmark, with the majority of the outperformance being driven by strong results within the Investment Grade Corporate Bond portfolio.

Outlook

Looking ahead into Q2 2017, there are a number of events that are likely to impact the direction of financial markets, including,

but not limited to: the outcome of the French Presidential election; the ability of the Trump administration to navigate a US debt ceiling and execute its policy agenda; an OPEC/non-OPEC oil production cut extension; the expectation of greater clarity from the Federal Reserve regarding the timing, size and scope of the anticipated balance sheet unwind as well as further color on interest rate increases; and, finally, whether the US economy can rebound from what was expected to be a soft quarter of realized growth in Q1.

Should the economic recovery begin to underwhelm due in part to a subdued pace of nominal income growth, or if evidence surfaces that inflation globally has begun to peak, or the Federal Reserve move more aggressively on the

balance sheet/interest rates, and/or the Trump administration fail to deliver on its policy agenda, financial markets may begin to re-rate optimistic growth and inflation expectations leading to a period of price discovery, particularly given the very low levels of realized equity and fixed income volatility. Investment strategies that remain flexible in anticipation of this potential increase in volatility associated with these unknowns are likely to continue to be favored in this environment.

Sentinel Low Duration Bond Fund performance as of 03/31/2017 (%)			Cumulative return YTD	Average annual total return				
				1 year	3 years	5 years	10 years	Since inception

The Fund is subject to credit and interest rate risk. Bond values will generally decrease when interest rates rise and will generally increase when interest rates fall. Mortgage-backed securities (MBS) are subject to pre-payment risk. These risks may result in greater share price volatility. Bonds with lower credit ratings are more speculative and likely to default than higher-quality bonds and tend to fluctuate more widely in value. International securities are subject to political influences, currency fluctuations and economic cycles that may be unrelated to those affecting the domestic financial markets and may experience wider price fluctuations than US domestic securities. Fund shares are not insured or guaranteed by the US government or its agencies.

The Fund may use derivatives, which are financial contracts whose value depends upon or is derived from the value of an underlying asset, reference rate, or index. The Fund may use derivatives as part of a strategy designed to reduce exposure to certain risks, such as risks associated with changes in interest rates, or currency or credit risk ("hedging"). The use of derivatives may reduce the Fund's return and increase the volatility in movements in the Fund's net asset value. For additional information regarding the use of derivatives, please see the Fund's current prospectus.

On January 31, 2014 the Sentinel Short Maturity Government Fund was renamed the Sentinel Low Duration Bond Fund and the Fund's investment strategies changed. In addition, the Fund adopted the Barclays 1-3 Year US Government/Credit Index as its new benchmark and discontinued the use of a secondary benchmark. Performance and ratings prior to January 31, 2014 relate to the Fund's prior investment strategies.

1. Performance of the Sentinel Low Duration Bond Fund's Class A shares prior to June 1, 2006, has not been adjusted to reflect the decrease in the maximum 12b-1 fee from 0.35% to 0.25%. If it had, those returns would be higher. The Class A returns are based on the 1% maximum sales charge and are not adjusted to reflect a maximum sales charge of 3% in effect from June 1, 2006 to December 31, 2008. If they were, the returns would be lower.
2. Performance of the Sentinel Low Duration Bond Fund's Class I shares prior to their inception on January 31, 2014 is based on the performance of the Fund's Class A shares, restated to reflect that Class I shares are not subject to a sales charge. The "since inception" performance data for Class I shares is calculated from March 27, 1995, which was the inception date of the Fund. Only eligible investors may purchase Class I shares, as described in the prospectus.
3. Performance of the Sentinel Low Duration Bond Fund's Class S shares prior to January 31, 2014 has not been adjusted to reflect the decrease in the maximum 12b-1 fee from 0.75% to 0.50%. If it had, those returns would be higher, except for the period from April 1, 2013 to January 30, 2014 during which a voluntary waiver of 0.25% of those fees was in effect. Performance of the Class S shares prior to their inception on March 4, 2005 is based on the performance of the Fund's Class A shares, adjusted to reflect that Class S shares do not charge a front-end sales charge and adjusted for Class S's higher expenses. The "since inception" performance data for Class S shares is calculated from the inception date of the Fund.

The Bloomberg Barclays 1-3 Year US Government/Credit Index is an unmanaged index of US government, government agency and investment grade corporate securities with maturities of one to three years.

An investment cannot be made directly in an index.
