Fund profile

As of 9/30/2016

A dynamic approach to managing interest rate risk

Investor concern over interest rate risk is on the rise. We believe static low duration strategies may be significantly challenged and investors may need to identify more dynamic strategies for securing current income, managing interest rate risk, and preserving portfolio principal.

Consider the Sentinel Low Duration Bond Fund:

Focused investment objective

The Fund seeks high current income and limited fluctuation in principal value by utilizing investments across corporate credit and securitized products.

Flexible framework

Sentinel believes the capability to invest in a variety of fixed income sectors is critical to generating consistent outperformance in different rate environments.

Disciplined team-oriented approach

Jason Doiron, FRM, PRM leads an experienced team of investment professionals that rely on an integrated and well-defined approach to investment decision making that dynamically manages risk and sources alpha.

The Fund has consistently delivered an attractive yield relative to Morningstar peers since the strategy was refocused in 2014.

Rolling 12-Month Yields (%)

Sentinel Low Duration Bond I 30-day SEC yield as of 9/30/2016 is 1.89%

Lower Duration

Duration vs. the Broader US Bond Market (Years)

Attractive Income Potential

12-Month Yield (%)

All class data is as of September 30, 2016 unless otherwise noted.

Data shown is historical performance for Class I shares unless noted and reflects reinvested distributions. Composition of holdings is subject to change. Investment return and principal value will vary so that you may have a gain or loss when you sell shares. Past performance does not guarantee future results; current performance may be higher or lower than data quoted. On January 31, 2014 the Sentinel Short Maturity Government Fund was renamed the Sentinel Low Duration Bond Fund and the Fund's investment strategies changed. In addition, the Fund adopted the Bloomberg Barclays 1-3 Year US Government/US Credit Index as its new benchmark and discontinued the use of a secondary benchmark. Performance and ratings prior to January 31, 2014 relate to the Fund's prior investment strategies.

12 Month Yield is the sum of a fund's total trailing 12-month interest and dividend payments divided by the last month's ending share price (NAV) plus any capital gains distributed over the same period.

SEC annualized yield is computed by dividing net investment income by the product of the average daily number of shares outstanding that were eligible to receive dividends and the maximum offering price per share on the last day for the 30-day or one month period ending on the date for which other performance data is shown.

The Bloomberg Barclays (BBgBarc) 1-3 Year US Government/Credit Index is an unmanaged index of US government, government agency and investment grade corporate securities with maturities of one to three years.

The Bloomberg Barclays (BBgBarc) US Aggregate Bond Index is an unmanaged index of the US investment grade fixed-rate bond market, with components for government and corporate securities, mortgage pass-through securities and asset-backed securities.

An investment cannot be made directly in an index.

The return for the Morningstar category is an average of funds within the particular category as determined by Morningstar based on investment styles as measured by their underlying portfolio holdings.

Alpha: the difference between a fund's actual returns and its expected performance, given its level of risk (as measured by beta). Beta is a measure of a fund's sensitivity to market movements. A portfolio with a beta greater than 1 is more volatile than the market, and a portfolio with a beta less than 1 is less volatile than the market.

Duration is a measure of the sensitivity of a bond's price to changes in interest rates. The shorter (longer) the duration, the lower (higher) the interest rate risk and price volatility.

Before investing, carefully consider a fund's objectives, risks, charges and expenses. Summary and full prospectuses containing this and other information are available from sentinelinvestments.com. Please read them carefully.

Like the markets, the sources of alpha generating opportunities are dynamic.

Security Selection

Asset Allocation

Duration Management

Trading

Sentinel Low Duration Bond Fund seeks to capture income using three of the four sources of alpha generation while utilizing derivatives to keep the Fund's duration pegged to between zero to three years, which has the potential to reward investors seeking to mitigate interest rate risk.

Sentinel believes that the optimal approach to investing in today's more challenging fixed income markets may require managers to source risk from across the spectrum of credit quality, coupon and maturities. Hedges may need to be implemented to further smooth any ride to higher rates.

Repeatable investment process

Portfolio construction blends quantitative and fundamental analysis

- A security-centric approach is used for initial portfolio construction. Sector allocation and security selection rely on a complementary blend of quantitative and fundamental analysis.

Diverse alpha generation

- Outperformance may be generated through a combination of security selection, asset allocation, and trading.
- Dynamic asset allocation and trading strategies to accommodate changing market environments.

Risk management

- Relative value analysis across securities and sectors.
- Comprehensive performance attribution provides continuous feedback to manage risk.

Sentinel's approach is structured to attempt to deliver greater potential return than shorter term bond and money market funds, and lower potential volatility than longer term bond funds. [Learn more from your advisor or sentinelinvestments.com.](#)

All class data is as of September 30, 2016 unless otherwise noted.

Data shown is historical performance for Class I shares unless noted and reflects reinvested distributions. Composition of holdings is subject to change. Fixed Income securities are subject to credit and interest rate risk. Bond values will generally decrease when interest rates rise and will generally increase when interest rates fall. Mortgage-backed securities (MBS) are subject to pre-payment risk. These risks may result in greater share price volatility. Bonds with lower credit ratings are more speculative and likely to default than higher-quality bonds and tend to fluctuate more widely in value. International securities are subject to political influences, currency fluctuations and economic cycles that may be unrelated to those affecting the domestic financial markets and may experience wider price fluctuations than US domestic securities. Fund shares are not insured or guaranteed by the US government or its agencies.

The Fund may use derivatives, which are financial contracts whose value depends upon or is derived from the value of an underlying asset, reference rate, or index. The Fund may use derivatives as part of a strategy designed to reduce exposure to certain risks, such as risks associated with changes in interest rates, or currency or credit risk ("hedging"). The use of derivatives may reduce the Fund's return and increase the volatility in movements in the Fund's net asset value. For additional information regarding the use of derivatives, please see the Fund's current prospectus.

1. Performance of the Class A shares prior to January 31, 2014 has not been adjusted to reflect the decrease in the maximum 12b-1 fee from 0.35% to 0.25%. If it had, those returns would be higher. The Class A returns are based on the 1% maximum sales charge and are not adjusted to reflect a maximum sales charge of 3% in effect from June 1, 2006 to December 31, 2008. If they were, the returns would be lower.

2. Performance of the Class I shares prior to their inception on January 31, 2014 is based on the performance of the Fund's Class A shares, restated to reflect that Class I shares are not subject to a sales charge. The "since inception" performance data for Class I shares is calculated from the inception date of the Fund. Only eligible investors may purchase Class I shares, as described in the prospectus.

3. Performance of the Class S shares prior to January 31, 2014 has not been adjusted to reflect the decrease in the maximum 12b-1 fee from 0.75% to 0.50%. If it had, those returns would be higher, except for the period from April 1, 2013 to January 30, 2014 during which a voluntary waiver of 0.25% of those fees was in effect. Performance of the Class S shares prior to their inception on March 4, 2005 is based on the performance of the Fund's Class A shares, adjusted to reflect that Class S shares do not charge a front-end sales charge and adjusted for Class S's higher expenses. The "since inception" performance data for Class S shares is calculated from the inception date of the Fund.
